## OTHER RESOURCES
- Journal/Newsletters: 187
- Recommended Books: 190
- Other Organizations: 168
- National Pain Strategies: 193
PARTNERS FOR UNDERSTANDING PAIN

BACKGROUND AND RESOURCES
Partners for Understanding Pain is a consortium of organizations that touch the lives of people with chronic, acute, and cancer pain.

The partnership, spearheaded by the American Chronic Pain Association, will strive to create greater understanding among health care professionals, individuals and families who are struggling with pain management, the business community, legislators, and the general public that pain is a serious public health issue.

Through its members, each of whom brings its own perspective to the dialogue, Partners for Understanding Pain represents a comprehensive network of resources and knowledge about issues in pain management.

Partners for Understanding Pain is dedicated to building the understanding and support that can help people with chronic, acute and cancer pain lead better lives. Call 1-800-533-3231 or visit [www.understandingpain.org](http://www.understandingpain.org) for more information.
PARTNERS LIST

AMERICAN ACADEMY OF NURSE PRACTITIONERS
AMERICAN ACADEMY OF PAIN MANAGEMENT
AMERICAN ACADEMY OF PAIN MEDICINE
AMERICAN ACADEMY OF PHYSICAL MEDICINE AND REHABILITATION
AMERICAN ASSOCIATION OF REHABILITATION NURSES
AMERICAN BACK SOCIETY
AMERICAN CANCER SOCIETY
AMERICAN CHRONIC PAIN ASSOCIATION
AMERICAN NURSES ASSOCIATION
AMERICAN PAIN SOCIETY
AMERICAN PHARMACISTS ASSOCIATION
AMERICAN PUBLIC HEALTH ASSOCIATION
AMERICAN RSDHOPE GROUP
AMERICAN SLEEP APNEA ASSOCIATION
AMERICAN SOCIETY OF LAW, MEDICINE & ETHICS
AMERICAN SOCIETY FOR PAIN MANAGEMENT NURSES
NATIONAL CONSUMER LEAGUE
NATIONAL FIBROMYALGIA ASSOCIATION
NATIONAL FIBROMYALGIA PARTNERSHIP
NATIONAL HEADACHE FOUNDATION
NATIONAL URBAN LEAGUE
NATIONAL VULVODYNIA ASSOCIATION
NATIONAL WOMEN’S HEALTH RESOURCE
NATIVE AMERICAN CANCER RESEARCH
PAIN POLICY FOUNDATION, INC.
PAIN & POLICY STUDIES GROUP: UNIVERSITY OF WISCONSIN
PHARMACEUTICAL RESEARCH AND MANUFACTURERS (PHRMA)
POST-POLIO HEALTH INTERNATIONAL
REFLEX SYMPATHETIC DYSTROPHY SYNDROME (RSDS) ASSOCIATION OF AMERICA
SICKLE CELL DISEASE ASSOCIATION
SIDNEY KIMMEL CANCER CENTER AT JOHN HOPKINS
THE NEUROPATHY ASSOCIATION
THE TMJ ASSOCIATION
TRIGEMINAL NEURALGIA ASSOCIATION
TRIUMPH OVER PAIN FOUNDATION
UNIVERSITY OF FLORIDA COMPREHENSIVE CENTER FOR PAIN
VZV RESEARCH FOUNDATION
Supporting the National Pain Strategies

It is important that your voice be heard if we are to improve the care of people with pain. One way to do that is to have your voice heard by those who can provide the funding to move the National Pain Strategy forward. Below is sample letter that you can use to write to your senators and congress person, so you can add your voice to those who have worked so hard to create this report Act today. Your voice can make a difference in the lives of millions! (Overview on page 193)
The Implementation Work Groups (IWG) are aligned with the National Pain Strategy (NPS) overarching themes and are charged with implementing the specific objectives through discrete deliverables described in the NPS. The IWGs will receive guidance and direction from the Implementation Steering Committee. Each NPS work group will include those federal stakeholders who signed on to address the thematic objectives of the NPS. They will also receive advice from external stakeholders who expressed interest in participating in the implementation of relevant objectives.
National Pain Strategy Objectives

Professional Education and Training
• Objective 1: Develop, promulgate, and update core competencies for pain care education, licensure and certification at the undergraduate and graduate levels.
• Objective 2: Develop a pain education portal that contains a comprehensive set of materials to enhance curricula.

Public Education and Communication
• Objective 1: Develop and implement a public awareness campaign about the impact of chronic pain to counter stigma and misperceptions.
• Objective 2: Develop and implement an educational campaign encouraging safer medication use, especially opioid use for patients with pain.

Disparities
• Objective 1: Reduce bias and its impact on care.
• Objective 2: Improve access to high-quality care for vulnerable groups.
• Objective 3: Facilitate communication among patients and providers.
• Objective 4: Enhance data on the impact of pain on high risk population groups, their access to care, and costs of disparities in pain care.

Prevention and Care
• Objective 1: Characterize the benefits and costs of current prevention and treatment approaches
• Objective 2: Develop nation-wide pain self-management programs.
• Objective 3: Develop standardized, consistent, and comprehensive pain assessments and outcome measures across the continuum of pain.

Services and Payment
• Objective 1: Define and evaluate integrated, multimodal, and interdisciplinary pain care.
• Objective 2: Enhance evidence for care.
• Objective 3: Incentivize payments for quality care based on a biopsychosocial model of pain: integrated, cost-effective, and comprehensive.

Population Research
• Objective 1: Estimate the prevalence of chronic pain and high-impact chronic pain.
• Objective 2: Refine and employ standardized electronic health care data methods to determine use and costs of care.
• Objective 3: Develop a system of metrics to track changes in prevalence, impact, treatment, and costs.
National Pain Strategy Updates

The National Pain Strategy (NPS), released in March 18, 2016, outlines a coordinated plan for reducing the burden of chronic pain that affects millions of Americans. NPS serves as a roadmap toward achieving a system of care in which all people receive appropriate, high quality and evidence-based care for pain. HHS is coordinating its implementation efforts across federal departments and collaborating with stakeholders externally.

In the year since the NPS’s release, HHS agencies and external partners have worked to align their respective programs, activities and initiatives with and in support of the NPS objectives. The following are examples of developments that highlight efforts in direct alignment with the NPS.

2018 Implementation Actions

Population Research

Objective 1: Estimate the prevalence of chronic pain and high-impact chronic pain.

- Tested and validated the NPS screening tool in a cohort of patients with chronic pain and published a manuscript with the findings from the study piloting the survey tools. [https://www.ncbi.nlm.nih.gov/pubmed/27377620](https://www.ncbi.nlm.nih.gov/pubmed/27377620) (NIH, External Stakeholders)
- Conducted and published a series of population level studies on pain prevalence, pain related disability and use of services using pain-relevant questions from 2011, 2012, National Health Interview Surveys. (NIH)

• Developed and submitted four developmental pain objectives for Healthy People 2020, 2030. All four were accepted, but funding to monitor objectives was available for only the first one (see below). All four will be considered for HP 2030. The developmental objectives are:

1. Decrease the prevalence of adults having high impact chronic pain (accepted as a developmental objective for HP 2020).

2. Increase public awareness/knowledge of high impact chronic pain

3. Increase self-management of high impact chronic pain

4. Reduce impact of high impact chronic pain on family/significant others (CDC, NIH).

• Developed, tested, and added two chronic pain-related questions that are aligned with the NPS pain screening tool for high impact chronic pain to the 2016 and 2017 National Health Interview Survey to develop data in support of the HP objectives and better inform population level pain research. (CDC, NIH, External Stakeholders)

• Convened external and federal stakeholders to review questions related to chronic pain and high impact chronic pain in the National Health Interview Survey and recommend revisions to the 2018 NHIS question set to align these surveys in line with the NPS screening tool and self-assessment questions Appendixes D and E https://iprec.nih.gov/sites/default/files/HHSNational_Pain_Strategy_508C.pdf (CDC, NIH)

Objective 2: Refine and employ standardized electronic health care data methods to determine use, underuse, effectiveness, and costs of pain treatments and services.

• A pilot study is underway to identify common EHR variables to identify patients with meaningful clusters of pain diagnoses and describe the receipt of pain-relevant health care services for these patients. It also uses survey data to estimate the prevalence of high impact chronic pain among adults who seek care in primary care settings, characterize patient self-care experiences and gaps and receipt of pain-related treatment services. Study completion expected in 2017. (NIH, External Stakeholders)

Prevention and Care

Objective 2: Develop nation-wide pain self-management programs

• Developed the Joint Pain Educational Program (JPEP) curriculum which highlights the importance of educating patients on skills and integrative health programs that emphasize self-management. JPEP includes multiple adjunct pain education videos (open access) for patients. (It also provides provider education resources (see Professional Education and Training - below).

http://www.dvcipm.org/clinical-resources/joint-pain-education-project-jpep/ (DOD, VHA)
Objective 3: Develop standardized, consistent, and comprehensive pain assessments and outcome measures across the continuum of pain.

• Developed the Defense and Veterans Pain Rating Scale (DVPRS) assessment of pain intensity and therapeutic goals of pain management, including reducing the impact of pain on physical and emotional function. The rating scale is consistent with current validated pain research tools and is adaptable to multiple clinical settings and scenarios throughout the continuum of care and research. A manuscript was published on results of psychometric testing of the pain rating scale. [https://www.ncbi.nlm.nih.gov/pubmed/?term=Pain+medicine+2106+17(8)%3A1505](https://www.ncbi.nlm.nih.gov/pubmed/?term=Pain+medicine+2106+17(8)%3A1505) (DOD)

Disparities

Objective 2: Facilitate communication among patients and health professionals

• Developed and hosted a webinar entitled, “Shared Decision Making: Changing the Conversation”. This webinar series introduces health care providers to the practice of shared decision making in behavioral health care in multiple settings, including pain management. Shared decision making engages the patient in the treatment plan, provides the patient with unbiased information, and facilitates the incorporation of individual preferences into the plan. This webinar helps to change cultural attitudes towards pain management and behavioral health care; increases public awareness and engagement of the individual and their family. [https://ahpnet.adobeconnect.com/p8bx02fl456/?launcher=false&fcsContent=true&pbMode=normal&smartPause=false](https://ahpnet.adobeconnect.com/p8bx02fl456/?launcher=false&fcsContent=true&pbMode=normal&smartPause=false) (SAMHSA)

• Developed and on-line tool to guide patients to communicate effectively with their health care providers to better manage their pain. The tool also includes patient education for treatment options and lifestyle changes to better manage and cope with chronic pain. “You Can Manage Your Chronic Pain to Live a Good Life” [https://store.samhsa.gov/shin/content/SMA13-4783/SMA13-4783.pdf](https://store.samhsa.gov/shin/content/SMA13-4783/SMA13-4783.pdf) (SAMHSA)

Service Delivery and Payment

Objective 1: Define and evaluate integrated, multimodal, and interdisciplinary care for people with acute and chronic pain

• Conducted a pilot study on treatment coverage for acute and chronic back pain. The study aims were to examine current coverage policies for pharmacological and non-pharmacological interventions to treat acute or chronic back pain within a state Medicaid managed care program, a large private insurer and a large pharmacy benefit management program. The study also outlines the methodology for evaluating coverage policies for treatments for acute and chronic back pain and to assess the feasibility and resources required to scale up the study to a national level. The study is a
systematic examination of coverage policies and the extent of coverage for non-opioid pain treatment alternatives. This assessment of coverage policies can be used to frame and target policy interventions among public and private payers that are necessary to advance the use of non-opioid alternatives to treat acute and chronic pain. The study is completed, and a full published report is expected in 2017. (ASPE, CDC)

- An expanded study of this pilot project is underway to assess coverage policies and parameters for treatment of low back pain at the national level. It uses the approaches developed in the pilot study described above. This study leverages the methodology and approach from the pilot study. It will assess coverage variables across large public and private health care providers and pharmacy distribution centers. The study is expected to be completed in March 2018. (ASPE, NIH).

**Objective 2: Enhance the evidence base for pain care and integrate it into clinical practice through defined incentives and reimbursement strategies**

- A Systematic Review of Studies on Noninvasive Treatments for Low Back Pain in Adults was performed to determine treatments used for low back pain and the evidence base for the efficacy and side effects of these treatments. [http://annals.org/aim/article-abstract/718376/systematic-review-strategies-using-exercise-therapy-improve-outcomes-chronic-low](http://annals.org/aim/article-abstract/718376/systematic-review-strategies-using-exercise-therapy-improve-outcomes-chronic-low)

- A systematic review through an AHRQ Evidence Based Practice Center of Noninvasive, Nonpharmacological Treatment of Five Chronic Pain Conditions is currently underway to determine the treatments used and evidence base for the efficacy and side effects of these treatments. A final report is expected to be available in 2018. (AHRQ)

**Professional Education and Training**

**Objective 1: Develop, review, promulgate, and regularly update core competencies for pain care education and licensure and certification at the pre-licensure (undergraduate) and post-licensure (graduate) levels.**

- Developed and published a set of pain core competencies for pre-licensure inter-professional education, which has been endorsed broadly by many pain-associated health care disciplines. [http://www.ncbi.nlm.nih.gov/pubmed/23577878](http://www.ncbi.nlm.nih.gov/pubmed/23577878) (External Stakeholders)

- Developed and hosts a health and wellness programs website with a module on chronic pain management to help providers meet the needs of Alaska Natives and American Indians with chronic pain. This educational tool is targeted to providers and includes pain assessment, substance screening, treatment planning and monitoring. [https://www.ihs.gov/painmanagement/](https://www.ihs.gov/painmanagement/) (IHS)

• Launched the IHS Essential Training on Pain and Addictions required six-hour provider training on fundamentals of pain management, patient assessment, safe opioid prescribing, and effective patient monitoring. https://www.ihs.gov/telebehavioral/index.cfm/training/ (IHS)

• IHS has partnered with the University of New Mexico (UNM) to allow IHS providers to participate in the UNM Chronic Pain & Opioid Management Tele ECHO Clinic (ECHO Pain). The ECHO pain clinic facilitates a multifaceted approach to chronic pain by incorporating a team of specialists that support primary care clinicians in rural communities in the management of chronic pain and opioids. The clinic includes didactic presentations by specialists on specific topics of interest and in-depth case-based presentations by community clinicians for feedback and recommendations. http://echo.unm.edu/nm-teleecho-clinics/chronic-pain-and-opioid-management/ (IHS)

Objective 2: Develop a pain education portal of standardized materials to enhance curricula and competency

• Development of curriculum resources through the NIH Centers of Excellence on Pain Education. Several case-based scenarios on pain management for pain care providers were developed and evaluated through the Centers of Excellence and made available for public access. They are case-based learning modules on assessment, treatment, and outcomes for complex pain patients. https://www.painconsortium.nih.gov/NIH_Pain_Programs/CoEPES.html (NIH)

• Developed the Joint Pain Educational Program (JPEP) curriculum which provides primary care pain education for federal providers. JPEP consists of thirty didactic, evidence-based education modules and video adjuncts covering essentials of quality pain management for primary care providers. JPEP includes multiple adjunct pain education videos for patients (see Prevention and Care, Objective 2 – above) http://www.dvcipm.org/clinical-resources/joint-pain-education-project-jpep/ (DOD, VHA).

• “Pathways to Safer Opioid Use” is an immersive, interactive training for health professionals that promotes the appropriate, safe, and effective use of opioids to manage chronic pain. The training tool was designed using the opioid-related recommendations outlined in the National Action Plan for Adverse Drug Event Prevention Plan. The training uses the principles of health literacy and a multimodal, team-based approach to promote the appropriate, safe, and effective use of opioids to manage chronic pain. This web-based training allows the participant to assume the role of four playable characters who make decisions – controlled by the participant – about preventing opioid-related adverse drug events. The characters represent the following roles: primary care physician, nurse, pharmacist, and patient. It offers one CME/CE hour. The training will allow providers to apply health literacy strategies to help patients understand and act on information to prevent opioid related adverse drug events. Providers will be able to identify individual risk factors, opioid medications, and interactions that place individuals with chronic pain at increased risk for opioid
related adverse drug events. Providers will be able to recognize the importance of a multidisciplinary, team-based approach to treating patients with chronic pain. Providers will be able to demonstrate the ability to combine the principles of the Health Literate Care Model and the biopsychosocial model of chronic pain management. The long-term goal is to decrease adverse drug events.

• Developed and disseminated an Opioid Overdose Prevention Toolkit which equips communities, health care providers and local governments with material to develop policies and practices to help prevent opioid-related overdoses and deaths. It equips health care providers, communities and local governments with material to develop practices and policies to help prevent opioid-related overdoses and deaths. Addresses issues for health care providers, first responders, treatment providers, and those recovering from opioid overdose.

http://store.samhsa.gov/product/Opioid-Overdose-Prevention-Toolkit-Updated-2016/SMA16-4742 (SAMHSA)

A companion suite of tools and resources on a variety of pertinent topics such as non-pharmacologic therapies to encourage uptake of the recommendations contained in the Guideline. http://www.cdc.gov/drugoverdose/prescribing/resources.html (CDC)

• Developed and hosted a webinar series for clinicians to learn about the recommendations outlined in the CDC Guideline for Prescribing Opioids for Chronic Pain. See https://www.cdc.gov/mmwr/volumes/65/rr/rr6501e1.htm

Four past live broadcast webinars are archived on CDC’s website. One session addresses non-pharmacological treatments for chronic pain. CDC encourages professional schools to incorporate elements of the CDC Guideline into their curricula as training tools about evidence-based recommendations on safe prescribing of opioids and pain management. https://www.cdc.gov/drugoverdose/prescribing/trainings.html (CDC)

Public Education and Communication

Objective 2: Develop and implement a national educational campaign to promote safer use of all medications, especially opioid use, among patients with pain

• Implements substance use and mental health services treatment locators.

o The Behavioral Health Treatment Service Locator is a source of information for persons seeking
treatment facilities for substance use and/or mental health problems [https://findtreatment.samhsa.gov/](https://findtreatment.samhsa.gov/)

- The Opioid Treatment Program Directory identifies opioid treatment programs by state. [http://dpt2.samhsa.gov/treatment/directory.aspx](http://dpt2.samhsa.gov/treatment/directory.aspx)

- The Buprenorphine Treatment Physician Locator [https://www.samhsa.gov/medication-assisted-treatment/physician-program-data/treatment-physician-locator](https://www.samhsa.gov/medication-assisted-treatment/physician-program-data/treatment-physician-locator) finds physicians authorized to treat opioid dependency with buprenorphine by state. The treatment locator also can be used to identify clinicians who have expertise in managing pain for those with substance use disorders and those who address chronic pain in a manner that promotes safer use of medication. (SAMSHA)
Pain Management

YESTERDAY

Early Greeks and Romans advanced the idea that the brain played a role in producing the perception of pain.

In the 19th century, physician-scientists discovered that opiates such as morphine could relieve pain and chemist Felix Hoffmann developed aspirin from a substance in willow bark. Aspirin remains the most commonly used pain reliever.

The French physician, Dr. Albert Schweitzer, proclaimed in 1931 that, “Pain is a more terrible lord of mankind than even death itself.”

In 1994, the International Association for the Study of Pain (IASP) (http://www.iasp-pain.org/) defined pain as an “unpleasant sensory and emotional experience associated with actual or potential tissue damage.”

2007 provided us with the WHO Normative Guidelines on Pain Management: Report of a Delphi Study to determine the need for guidelines and to identify the number and topics of guidelines that should be developed by WHO. http://www.who.int/medicines/areas/quality_safety/delphi_study_pain_guidelines.pdf?ua=1

TODAY

Pain affects more Americans than diabetes, heart disease and cancer combined.

Pain is cited as the most common reason Americans access the health care system. It is a leading cause of disability and it is a major contributor to health care costs.

According to the National Center for Health Statistics (2006), approximately 76.2 million, one in every four Americans, have suffered from pain that lasts longer than 24 hours and millions more suffer from acute pain.

Chronic pain is the most common cause of long-term disability.
The diversity of pain conditions requires a diversity of research and treatment approaches.

Pain can be a chronic disease, a barrier to cancer treatment, and can occur alongside other diseases and conditions (e.g. depression, post-traumatic stress disorder, traumatic brain injury).

For infants and children, pain requires special attention, particularly because they are not always able to describe the type, degree, or location of pain they are experiencing.

Discoveries of differences in pain perceptions and responses to treatment by gender has led to new directions for research on the experience and relief of pain. For example, medications called kappa-opioids provide good relief from acute pain in women yet increase pain in men.

NIH-supported scientists identified a gene variant of an enzyme that reduces sensitivity to acute pain and decreases the risk of chronic pain.

COX-2 (cyclooxygenase-2) is a major contributor to pain associated with inflammation. A study of genes affected by COX-2 led to the discovery of its role in connection to multiple cellular pathways that contribute to pain relief and adverse side-effects.

Behavioral interventions for pain also demonstrate promise for providing pain relief either in conjunction with or in lieu of drug interventions. For example, NIH-supported research has demonstrated that individualized pain management programs may reduce cancer pain for some patients.

**World Health Organization Treatment Guidelines on Pain**

The Access to Controlled Medications Programme identified the development of treatment guidelines that cover the treatment of all types of pain as one of the core areas of focus for improving access to opioid analgesics. Such guidelines are interesting both for health-care professionals and policy-makers. They are also important in improving access to controlled medicines for determining when those opioid medicines and when non-opioid medicines are preferred. Based on a Delphi study, WHO planned the development of three treatment guidelines, covering chronic pain in children, chronic pain in adults and acute pain.

The WHO Guidelines on the Pharmacological Treatment of Persisting Pain in Children with Medical Illnesses are evidence-based, following the procedures and methods prescribed by the WHO Guidelines Review Committee. These guidelines and related documents can be downloaded free of charge.

WHO is also developing the WHO Guidelines on the Pharmacological Treatment of Persisting Pain in Adults with Medical Illnesses and the WHO Guidelines on the Pharmacological Treatment of Acute Pain. The scoping document for the former have been approved by the Guidelines Review Committee and published. [http://www.who.int/medicines/areas/quality_safety/Scoping_WHO_GLS_PersistPainAdults_webversion.pdf?ua=1](http://www.who.int/medicines/areas/quality_safety/Scoping_WHO_GLS_PersistPainAdults_webversion.pdf?ua=1)  For the latter, a draft scoping document is currently under review and will be made available when finalized.

**TOMORROW**

The NIH is poised to make major discoveries that will improve health outcomes for individuals
experiencing acute or chronic pain by applying opportunities in genomics and other technologies to improve our understanding of the fundamental causes of pain. This will be accomplished through translating basic laboratory science to new, improved pain treatments and by providing strategic support for the research community to discover more effective pain treatment strategies.

Applying genomics and other technologies to understand pain. Advances in basic and clinical genetics are making it possible to both characterize genetic factors related to pain sensitivity and develop novel therapeutic approaches.

In ongoing pain studies, scientists are using technologies such as microarray-based assays (complex genetic and molecular tests) to better understand the mechanisms of pain and analgesia, identify new targets for analgesic drugs, and test the efficacy and adverse reactions of newly developed or currently used drugs to treat pain. Researchers are currently using these technologies to discover the mechanisms by which drugs such as COX-inhibitors and neurotropins may relieve pain.

Translating basic science to improved pain treatments. Researchers will continue to focus on advancing both biological and behavioral pain management strategies from the research sphere to clinical applications.

Innovative ways to categorize and measure pain are currently being studied. For example, scientists are using computer-assisted technology to develop a novel program that will capture and quantify pain experiences. Tools such as this will be combined with existing methods to more accurately and consistently measure pain over time and across groups, diseases, and conditions.

Research will continue identifying biomarkers and biological pathways associated with painful conditions resulting from the use of drugs to treat diseases such as cancer and HIV/AIDS (http://www.umgcc.org/research/et.htm).

Providing Strategic Support for Research into Pain Treatment Strategies.

The NIH Pain Consortium (http://painconsortium.nih.gov/), an effort involving over 21 NIH Institutes, Centers, and Offices, promotes collaboration among the various NIH programs that support pain research, and provides strategic direction for accelerating advances in pain prevention, and treatment.

The Patient Protection and Affordable Care Act has established an Interagency Pain Research Coordinating Committee, led by the Department of Health and Human Services, to assess and coordinate pain research efforts across the Federal government.

International Association for the Study of Pain Working Group on Classification of Chronic Pain Reports Progress on ICD-11

Let Your Voice Be Heard!

Together our voices are very strong!
Have your voice heard

There is nothing more powerful than your voice talking to your local Congressional Representatives or Senators about the issues you face when dealing with pain. It will be the stories you tell and issues that you relate to them or their staff that can impact their opinions about the dilemmas that you face. There are several issues for people who are seeking to obtain access to care in order to improve the quality of life and increase function while reducing the sense of suffering that pain can cause.

We realize that it is extremely difficult for you to do a visit in Washington, DC. The cost of the trip, the long hours of travel and the time away from work and family can present insurmountable obstacles. That is why we are asking you to make plans this September to visit them in your own community. Every legislator has local offices, places where you can visit to have your voice heard.

We have designed this tool kit to help you reach out to your local legislators so that you can schedule an appoint to visit their office. We will provide you with:

- how to make the appointment,
- a sample letter of request,
- what to do during the visit and the follow up.

It is our hope that you will make the effort during September to tell those who represent you in Washington, DC the issues you face as you seek a solution to live a life of pain.
Meeting with Your Legislator: *Tips for a Successful Experience*

**Step One: Scheduling an Appointment**

- When you call your elected official’s district office, ask to speak with the scheduler (the person who sets up all the legislator’s appointments).

- Using the script provided in your packet as a guide, tell the scheduler that you are a constituent of Congressperson X, briefly summarize the purpose for the meeting, and list the names of those who will attend with you.

- Ask for the contact information of the person in the office with whom you should confirm your meeting with when the date gets closer.

- If you cannot get an appointment, ask for the office address and the name of the person to whom you may mail information.

**Step Two: Be Prepared, Punctual, and Accommodating**

- Be prepared to meet with your elected official or his/her staff by reviewing materials provided in this packet and noting any important points you don’t want to forget during your meeting.

- Legislators have hectic schedules, so it is crucial that you arrive for your meeting on time and prepared (plan to arrive at least 10 minutes prior to the scheduled meeting time).

- Hurry Up and Wait. It is possible that your legislator may have unforeseen schedule changes the day of your meeting and your meeting may be delayed or interrupted. Be patient and flexible. If your legislator is unable to meet with you, ask to meet instead with his or her aide responsible for health care issues. This individual can carry your message to the elected official.

- Life Happens. If you find yourself running late for any reason, make sure you have the office phone number to call and give them warning. As long as you call ahead, they are most likely to still try to fit you in.
Step Three: Leave Behind Written Materials

❖ A fact sheet will be provided to you by Partners for Understanding Pain. Please make sure that you take these with you to your meeting(s) and leave them behind. These materials will give the legislators and their staff an opportunity to review the issues presented during the meeting and begin a file on the issue (they have not heard the last of us!).

❖ You can also develop a fact sheet about your organization, the population it serves, its reach nationally or internationally, support/contact you may have in your home state and any bills that have been introduced in your respective states.

Step Four: Thank You, Thank You

❖ Send a version of the sample thank you letter included with this guide once your meeting is over.

To find your elected officials, go to: https://www.usa.gov/elected-officials there you will find both state and federal officials.
Sample Script for Scheduling an Appointment

The following sample script is provided to assist you in scheduling an appointment with your legislator.

To receptionist:
Hello. My name is _________ and I am Congresspersons __________’s constituent. I am calling to set up an appointment with Congressperson __________ and/or his staffer to discuss the importance of pain care today and the National Pain Strategy. May I please speak to his/her scheduler?

To scheduler:
Hello. My name is _________ and I am Congresspersons __________’s constituent. I am calling to set up an appointment with Congressperson __________ and/or his staffer to discuss the importance of pain care today and the National Pain Strategy.

September is Pain Awareness Month and all across the country people like me will be meeting with their government officials to garner support and build awareness of the importance of taking chronic pain issues seriously.

Does Congressperson __________ and/or his staffer have any availability on September __?

Scheduler answers YES:
Wonderful. Who is the appropriate person in the office for me to contact to confirm this appointment as the date gets closer? Scheduler Response. Thank you very much for your time.

Scheduler answers NO, Congressperson X and/or his/her staff is unavailable to meet during the month:
Is there a time when the Congressperson __________ and/or his staffer is available to meet?

Scheduler answers YES:  Wonderful. Who is the appropriate person in the office for me to confirm this appointment as the date gets closer? Scheduler Response. Thank you very much for your time.

Scheduler answers NO:  I am sorry that he/she is unavailable to meet in person. In this case, I would like to mail some materials to his/her office for review. To whom should these be directed? Scheduler Response. Thank you very much for your time.
Sample Letter of Thanks

Dear Congressperson X:

Thank you for meeting with me.

Insert paragraph referencing something you talked about or how your visit relates to the mission of your association to combat chronic pain

The National Pain Strategy can play an important role in promoting and advancing the understanding of chronic pain. By focusing public attention on pain, ensuring the education of professionals in pain care, enhancing research and the sharing of new information about pain, and addressing the needs of all who experience pain, this effort will greatly enhance the quality of life of those with pain and pay economic dividends for decades to come.

Again, I/we greatly appreciate your time and we look forward to assisting you in advancing this legislation.

Sincerely,

Your signature

Checklist for Visit

4-5 Weeks Prior to Meeting Date

___ Review information included in this kit about National Pain Strategy

___ Please contact Partners for Understanding Pain with any questions you might have.

3 Weeks Prior to Meeting Date

___ Contact others in your area who are scheduled to take part in the event and confirm their participation.

2 Weeks Prior to Meeting Date

___ Contact legislators’ offices to confirm meeting date(s) and time(s).

Week Prior to Meeting Date

___ Review materials (especially fact sheets, survey information, overview of National Pain Strategy and handouts that you will be bringing with you to the meeting).

___ Gather materials you will need for your meeting:
   - Handouts for Legislators (Fact Sheet)
   - Contact information for you and others who will join you during your visit
   - Any notes you have made about important points you would like to make during the visit.

Day of Meeting

___ Make sure to bring all items listed directly above.

___ Review Meeting with Your Legislator: Tips for a Successful Experience.
KEY MESSAGES ABOUT PAIN

❖ Pain is the number-one cause of adult disability in the United States and affects one in three people or about 100 million Americans.

❖ Pain costs an estimated **$560 to $635 billion annually** in lost workdays, medical expenses, and other benefit costs. ¹

❖ Unmanaged pain can slow the rate of recovery for surgical patients and affect the quality of outcomes.

❖ Cancer patients who experience breakthrough pain are hospitalized and visit the emergency room more often than patients whose pain is under control.

❖ In spite of its pervasiveness, few physicians receive more than a few hours of formal training on pain management.

❖ **Pain is a major economic issue.**
  ❖ According to the National Institute for Occupational Safety and Health, pain costs $100 billion annually in lost workdays, medical expenses, and other benefit costs.

❖ Skyrocketing health care costs leave some, especially senior citizens, minorities, and the urban and rural poor, unable to get treatment that can help them manage their pain.

❖ **Pain is a major social issue.**
  ❖ Long-term, unmanaged pain can cause people to withdraw from family and friends and leave them unable to care for children, hold steady jobs, and at times even face a personal future.

❖ Pain has an impact on the fabric of society well beyond the individual, effecting his or her spouse or partner, children, family, and community.

❖ **Personal Story (Optional)**

¹ (IOM, Relieving Pain in America: A Blueprint for Transforming Prevention, Care, Education, and Research, 2011)
You do not have to share your personal story during your visit, however, doing so is an extremely powerful form of communicating the issue and often times elicits understanding and empathy. You do not need to provide personal graphic details of your struggle. The most important points for you to discuss (briefly) are:

1) how chronic pain has impacted your life (e.g., things that you are now unable to do because of the disorder)
2) your struggle to find a knowledgeable provider (e.g., how much time passed before you were diagnosed, how many doctors you had to visit before finding help)
3) how treatments for chronic pain have helped (or not helped) your condition and how they have affected you (e.g., side effects)
Talking Points

1. **PROTECTING ACCESS TO CARE**

   Department of Health and Human Services should continually evaluate the impact of legislative, regulatory and enforcement measures to protect against unintended consequences that threaten legitimate patient access to appropriate care, including the appropriate use of opioid medications.

   Several legislative initiatives, recognize the need to evaluate strategies designed to reduce abuse and diversion to ensure that legitimate patient access to pain medications is preserved. Such evaluation should be conducted by those Federal agencies most directly involved, including FDA, CDC, ONDCP and DEA. It should also be informed by input from a wide array of stakeholders, including particularly patient advocates and health professionals with pain management expertise.

2. **PAYMENT AND COVERAGE POLICIES**

   The Centers for Medicare and Medicaid Services (“CMS”), with outreach to private payors, should do a comprehensive review of payment and coverage policies that may serve to promote opioid prescribing to the detriment of other therapies.

   As noted above, opioids are often prescribed because they are readily available, they work for many patients, and they are generally inexpensive relative to other therapeutic options. Their relatively low short-term cost makes them attractive to payors. For this reason, other therapeutic options that may be superior for some patients and some conditions, that have fewer downside risks than opioids, and that may well be less expensive in the long run, face payment and coverage barriers. Ensuring appropriate payment for the most clinically appropriate therapeutic option should be part of any comprehensive approach to ensuring good pain management. Otherwise, a coverage or payment bias towards opioids may well substitute cheaper care for better care.

   When opioid therapy is indicated, coverage and payment policies must support the other elements of comprehensive pain care that ensure **safe use**, including counseling services.
aggressive monitoring through follow-up office visits, drug testing, and similar patient compliance-related services, and effective use, including behavioral, psychological and rehabilitative therapies, as well as other indicated medical and interventional approaches.

3. PUBLIC EDUCATION

Department of Health and Human Services should implement the Institute of Medicine’s 2011 recommendation in Relieving Pain in America to undertake a national public education campaign on pain management which includes information on (1) the role prescription opioids play as one therapeutic option for some patients with some conditions, (2) the safe use and disposal of such drugs, and (3) the risks to patients and society when such drugs are used for non-medical purposes or without appropriate clinical oversight.

4. PROFESSIONAL EDUCATION

Support positive incentives to promote physician education on safe and effective clinical practice with respect to prescribing opioids and other controlled substances as part of pain medicine diagnosis and treatment.

Most medical students and other health professionals receive insufficient training in both pain management and addiction medicine, including responsible prescribing practices, during their undergraduate and graduate training programs. There is a need for many to supplement core curricula through CME, particularly for primary care physicians. Practitioners beginning or maintaining opioid therapy should approach risk assessment systematically by applying validated screening instruments and other tools such as drug testing. There are already a multitude of both public and private efforts underway to develop and deliver education and training to enhance the competence of physicians and other professionals. For example, demonstration of an adequate knowledge base in pain management can be linked to state medical licensure and enforced through State Boards of Medicine, and this is already happening in some states. The Risk Evaluation and Mitigation Strategies (“REMS”) overseen by the FDA for certain controlled substances are another example, with increased numbers of physicians expected to receive REMS training in the years ahead.

The NIH Pain Consortium has designated, and is modestly funding, health professional schools to serve as Centers of Excellence in Pain Education (CoEPEs). These centers develop and disseminate new pain management curriculum resources for medical and other schools which will improve pain management training for the next generation of practitioners. AHRQ’s Health Care Innovations Exchange is disseminating training materials for use in emergency departments confronted with both drug-seeking patients at high risk of abuse, and patients with legitimate chronic pain conditions that are heavy users.
of emergency departments because their pain is not effectively managed in other settings. SAMHSA also promotes accredited CME training on opioid prescribing practices for those treating chronic non-cancer pain patients.

Institutional health care providers and health systems have also recognized the particular risks associated with opioid medication and are actively training their own clinical workforces to better identify and manage risk associated with opioid prescribing.

Other examples abound, and more are under development. Collectively, they represent an appropriate response to improving pain care while at the same time better managing the particular risks associated with powerful pain medications.

DON'T JUST SIT THERE
September is Pain Awareness Month.

The American Chronic Pain Association’s (ACPA) Give a Squat 4 Pain campaign will raise funds for education and support programs that help those living with chronic pain live more fully. The campaign is simple, fun, challenging—and a little painful.

Here’s how you can participate and help raise funds to assist those living with chronic pain.

**By yourself, or with family, friends, or coworkers, find a wall or any vertical surface and and:**

**SQUAT**
Assume the squat position and hold it for as long as you can—longer than your friends. You’ll start to feel the burn, but that’s the point.

**DONATE**
While your legs still hurt, visit theacpa.org and make a donation. Be generous: Your pain will go away in just a few minutes.

**INSPIRE**
Challenge others to complete a wall squat by sharing yours on social media. Don’t forget to include #GiveASquat4Pain in your post.

For more than 30 years, the ACPA has been committed to facilitating peer support and education for individuals with chronic pain and their families so that these individuals may live more fully in spite of their pain. The ACPA is also active among the health community, engaging with policy makers and the public at large about the issues of living with chronic pain.

For more information about the ACPA or how you can become an advocate for those living with chronic pain, visit theacpa.org or call 1-800-533-3231.

#GiveASquat4Pain
Give A Squat 4 Pain
Feel the pain as you hold the squat
Challenge your friends and coworkers to hold the squat longer than you
Take a photo and share it on Facebook or Twitter

#GiveASquat4Pain
September Pain Awareness Month Campaign
Inside Out #acpainsideout

Pain is something that many of us feel, but it cannot be seen, that does not mean it is not real. If only one could see our pain, but it is for the most part inside our bodies, often preventing us from enjoying life, working or even sleeping.

One of the most difficult things to do is to have others understand what it is like to live with pain. But, perhaps we can bring their attention to the pain that lives within.

Help us to generate awareness by wearing at least one piece of clothing INSIDE OUT on a Friday during September Pain Awareness Month. People will ask you why you are doing this; the perfect opportunity to talk about the importance of the topic.

Post your picture and challenge your friends to wear their cloths INSIDE OUT during a Friday in September!

Make a donation to the American Chronic Pain Association #acpainsideout to help us to reach more people living with pain.
Talking Points:

- There are 100 million people in the US living with some form of pain
- The cost exceeds $600 billion annually
- Chronic pain is an invisible epidemic that has a profound effect on people and society
- Chronic pain does not discriminate; it affects people of all ages and backgrounds
- Almost 1 in 3 people in the U.S. have chronic pain
- Many people conceal their pain because of stigma and shame
- The personal and financial costs of chronic pain are immense
- Chronic pain has an impact on family members and can suffer as much as the person, they just don’t feel the pain

Challenge your friends, family and coworkers to wear their clothes inside out one Friday in September, post your pictures #acpainsideout and make a donation to the ACPA!
Mission Statement

Advancing awareness, understanding, and management of pain care throughout the world.

International Survey on Access and Attitudes Toward Pain

We have united with the aim of contributing to the improvement of pain (self-) management. For this purpose, we conducted a questionnaire-based survey completed by over 600 people living with pain from 37 countries and all continents.

Survey Results

The survey data compiled to date (N=672) are predominately from North Americans (78%) and dominated by responses from women (78%)  

- Prescription medications were the most commonly used treatments for pain (75%), followed by OTC medications (57%)  
  - 43% cited using physical therapy (PT), though the duration of PT was not assessed  
  - 14% used marijuana, which the group noted was increasing  
  - Acupuncture has also risen in popularity, and is now covered in the VA  
  - Several differences were noted in data from Pakistan  
    - 92% used OTC medications  
    - only 2% used prescription medications  
- In Poland (N=65), 70% reported using OTC products, and 10% used prescription medications  
- When asked how many medications required a prescription, 3 was the most common answer  
  - The group noted that the survey did not specify pain medications, nor did it specify how many were controlled substances  
- 75% of survey participants believed their HCP took their pain seriously, which was considered surprisingly high  
  - The question did not distinguish between a general HCP and a pain specialist  
- General practitioners were the most common HCPs managing patients’ pain, followed by pain specialists and neurologists  
  - In Uganda, many have lost faith in the dysfunctional health care system, and instead rely on spiritual healers  
- Survey participants noted a mix of methods of payment for their care, including private insurance, government insurance, personal income, or some combination of these  
  - In Uganda, patients often barter possessions for herbal remedies  
- 2% visited a free clinic, driven primarily by ex-US respondents
• Access to free care in the EU is limited because of extremely long wait times
• In Pakistan, 100% of respondents used personal income to pay for pain management
• In Bangladesh, patients have the choice between cheap herbal therapies or expensive pharmaceuticals paid for out of pocket
  • There is no competition among companies providing these medications
**Know Your Dose**

**Audience**
Below you will find draft acetaminophen safe use Twitter and Facebook posts for you to promote to your organizations as you see fit over the course of the year. If you have any questions regarding the contents of this toolkit, please contact Elizabeth Easterly at Elizabeth.Easterly@gmmb.com.

Ask Me 3 is a program that addresses the need for increased communication for consumers to understand their health care issues. It is a national effort to improve health literacy.

Good questions for your good health:
1. What is my main problem?
2. What do I need to do?
3. Why is it important for me to do this?

Every time you talk with a doctor, nurse, or pharmacist, use the Ask Me 3 questions to better understand your health.

**Tips for Clear Health Communication**

Here are a few tips you can try:

Your doctor, nurse, and pharmacist want you to get the information you need to care for your health. To remind yourself what you need to do and the questions you can ask at your next medical visit: [http://www.npsf.org/?page=askme3](http://www.npsf.org/?page=askme3)

- I will ask the 3 questions.
- I will bring a friend or family member to help me at my doctor visit.
- I will make a list of my health concerns to tell my doctor.
- I will bring a list of all my medicines when I visit my doctor.
- I will ask my pharmacist for help when I have questions about my medicines.
When to Ask Questions

You can ask questions when:

- You see your doctor, nurse, or pharmacist.
- You prepare for a medical test or procedure.
- You get your medicine.

What If I Ask and Still Don't Understand?

- Let your doctor, nurse, or pharmacist know if you still don't understand what you need to do.
  
  You might say, "This is new to me. Will you please explain that to me one more time?"

The Ask Me 3 questions are designed to help you take better care of your health.

Who Wants to Answer?

Are you nervous to ask your health provider questions? Don't be. You may be surprised to learn that your medical team wants you to let them know that you need help.

Like all of us, doctors have busy schedules. Yet your doctor wants you to know:

- All you can about your condition.
- Why this is important for your health
- Steps to take to keep your condition under control
Action Ideas and Tools for Health Care Professionals

I choose to take action!
Partners for Understanding Pain
Presents
Health Care Professionals CARE
Compassionate Attentive Responsive Educational

Pain Awareness Events
September 2018

The campaign is part of September Pain Awareness Month activities developed by Partners for Understanding Pain and its partners. Our goal is to educate both health care providers and consumers at all levels of treatment and therapy. In addition, we seek to put pain on the national health care agenda as an issue that needs our immediate attention. Your involvement will ensure that our messages get out to the public.

By sponsoring a Pain Awareness Day within your clinical setting, you can make a difference in the assessment, treatment, and long-term management of pain. The goals of the CARE campaign are to:

- Create a focus on pain within a range of clinical settings;
- Engage the “front line” of patient care in a more informed and sensitive response to pain;
- Increase communication between patient and health care providers;
- Provide a repository of resources for health care professionals in a wide range of settings for their use in helping patients and the public;
- Generate community awareness through health care settings in the facility during September.

Suggested events:

- Luncheon conference with expert speaker in pain management
- Lecture series on assessment and treatment of pain throughout the day
- Cafeteria table with petitions in support of the National Pain Strategies, materials, and resource lists for the public

Partners for Understanding Pain
Copyright 2018
48
Health fair of community resources for people with pain
Seek out opportunities to speak at community clubs and service organizations about the importance of prevention of long-term pain by treating pain at the on-set, awareness of local health care resources and information about pain management.
Distribution of buttons to all staff members attached to flyer about pain assessment and management
Get your department to wear their clothes inside out on one Friday in September. This is a great opportunity to start the conversation about people living with pain and the struggler to clear up the misunderstanding about pain, it is invisible and internal. But it is REAL!

For more information about additional activities, contact the American Chronic Pain Association at 800.533.3231 or by email at acpa@theacpa.org.
Action for Awareness of Chronic, Acute, and Cancer Pain
Developing the Foundation for a Grassroots Community Public Relations Plan

SITUATION

Pain can touch all of us. It is estimated that one in three people experience some type of ongoing, chronic pain. Chronic, cancer and acute pain are often under-treated leading to increased use of health care resources and needless suffering. The impact of pain on our economy, our society, and healthcare is significant.

Yet there is still apathy and a lack of understanding about pain. Now, with the National Pain Strategy and Partners for Understanding Pain, some consortium organizations have come together to raise awareness about chronic, acute, and cancer pain through grassroots community outreach and a national media relations campaign.

The most important resource of our partnership is each organization’s ability to spread the word about chronic, acute, and cancer pain. To maximize our impact, Partners for Understanding Pain has developed the following document to suggest ways to raise awareness in your local community.

We welcome you to take these suggestions and customize them to align with your own organization’s mission. Together, we can saturate our local communities to bring pain to the forefront of public health issues.

COMMUNITY OUTREACH IDEAS

Develop a pain awareness education section of your organization’s website to spread the word about pain through education. Suggested items for the Website:

- Partners for Understanding Pain logo and link on homepage.
- Links to Partner organizations and their resources.
- Facts about how pain touches your organization.
- Distribute the Quality of Life Pain Scale to increase communication between the health care provider and the patient.
- Local community resource guide for people who have pain issues.
If relevant to your organization, success stories about people who have dealt effectively with pain.

Cultivate community partnerships with local businesses and organizations
Partnering with local businesses and organizations that may have a health-related mission will provide a key outlet to spread the word about pain management and to continue to build a network of partners.

Partnership ideas:
- Ask organizations to post and distribute materials about pain, resources, and information about the Partners for Understanding Pain program.
- Co-sponsor a community event, re: walk to raise awareness for the importance of pain management.
- Set up a booth or pass out information about pain at already established community events.
- Set up appointments with local legislators to educate them about pain and how it’s a major health issue that needs attention.
- Establish or re-establish connections with local hospitals to hold support meetings for people with pain. Invite health care professionals to talk about pain management.

Suggested places to promote pain and Partnership message materials:
- Drug stores
- Hospitals/doctor’s office
- Local chapters of health-related organizations; health fairs
- Health insurers
- Fitness centers/health-related stores
- Churches
- Libraries
- Senior centers

Join with local Partners, such as chapters of the Arthritis Foundation, Lupus Foundation of America, and National Consumer League
Contact local health-related organizations to promote the partnership and identify possible collaboration areas including:
- Offering a speaker to talk about how pain touches those with heart disease, diabetes and cancer; make the information relevant to their organization.
- Asking organizations to identify success stories among their members.
- Asking organizations to display information about the Partners for Understanding Pain’s resources and materials at community events and on their website.
Pain volunteer program

Local university, school, and church groups often seek volunteer opportunities. Join with them to create a volunteer program for students. Volunteers may visit or help with activities of people with pain who may live alone, creating a support network. They also may work for the awareness campaign directly.

“Ask the doctor” about pain day

Partner with local drug store, fitness, or health-related stores to sponsor a health care professional to be available to answer questions related to pain management for a day in the store. Organize a “Walk with the Doc” http://walkwithadoc.org/ day to reinforce the importance of staying physically active to better manage pain.

Create a resource guide for people with pain in your community

Creating a community resource guide for people who have chronic or cancer pain and their families can serve as an outlet to make people aware of the services in their community.

Suggested inclusions for the guide:

- Local pain doctors
- Local physical therapy organizations
- Local health food stores
- Support groups
- Local health-related organizations and programs
- Financial advisors and assistance resources
- Transportation resources for disabled
- Home health services
- Homemaking services
- Meals on wheels
- Senior centers
- Recreational opportunities in the community that provide craft lessons and such

In-service staff trainings and ongoing pain education at local hospitals

Partner with local hospitals and health care facilities to offer training on the intricacies of chronic and cancer pain to facilitate understanding among other health care professionals.

Partner with local hospitals to offer ongoing pain education outreach such as tabletop displays that offer facts about chronic and cancer pain.

HEALTH CARE PROFESSIONALS CALL ATTENTION TO THE IMPACT OF PAIN

Nursing Groups of Partners for Understanding Pain Mark Health Care Professionals CARE during September Pain Awareness Month

YOUR TOWN, State, September __, 2018—September has been declared Pain Awareness Month by the Partners for Understanding Pain, a consortium of more than 65 professional and consumer organizations that have an interest in pain. As part of this effort, health care professionals in (your workplace) are sponsoring Health Care Professionals CARE Compassionate Attentive Responsive Educational to bring attention to the importance of appropriate pain management in the clinical setting.

Unmanaged pain can slow the rate of recovery for surgical patients and affect the quality of outcomes. Cancer patients who experience breakthrough pain are hospitalized and visit the emergency room more often than patients whose pain is under control. Costs associated with prolonged chronic pain total approximately $600 billion a year. And health care professionals (HCP) often find themselves on the front lines of the fight against pain. Through the grass roots Health Care Professionals CARE Compassionate Attentive Responsive Educational campaign, we hope to increase awareness and understanding among health care facilities’ staff, patients, and the public about the complex issues of assessing and treating pain.

Add quote from your organization spokesperson here.

The campaign is part of September Pain Awareness Month activities developed by Partners for Understanding Pain. “Pain can touch any of us,” noted Penney Cowan, Executive director of the American Chronic Pain Association and convener of Partners for Understanding Pain. “It is the number one cause of adult disability in the United States, affecting one in three Americans, yet there is still apathy and a lack of understanding about pain.” Partners for Understanding Pain is
dedicated to raising awareness about chronic, acute, and cancer pain through community outreach and a national media campaign. Partners’ goals also include building a more comprehensive network of knowledge and better utilizing existing resources about pain management among its members.

For more information about other activities of Partners for Understanding Pain, contact the American Chronic Pain Association at 800-533-3231 or by email at acpa@theacpa.org.
HEALTH CARE PROVIDERS AT (FACILITY NAME) ARE WORKING TO BRING ATTENTION TO THE NEED FOR BETTER PAIN ASSESSMENT AND TREATMENT. THEIR EFFORTS ARE PART OF ACTIVITIES PLANNED BY PARTNERS FOR UNDERSTANDING PAIN, A CONSORTIUM OF MORE THAN 80 PROFESSIONAL AND CONSUMER ORGANIZATIONS THAT HAVE AN INTEREST IN PAIN AND ITS EFFECTS, FOR SEPTEMBER’S PAIN AWARENESS MONTH ACTIVITIES.

UNMANAGED PAIN CAN SLOW THE RATE OF RECOVERY FROM SURGERY. CANCER PATIENTS WITH UNMANAGED PAIN ARE HOSPITALIZED AND VISIT THE EMERGENCY ROOM MORE OFTEN THAN PATIENTS WHOSE PAIN IS UNDER CONTROL. COSTS ASSOCIATED WITH PROLONGED CHRONIC PAIN TOTAL APPROXIMATELY $600 BILLION A YEAR. HEALTH CARE PROVIDERS OFTEN FIND THEMSELVES ON THE FRONT LINES OF THE FIGHT AGAINST PAIN.

SOUNDBITE:
“PAIN IS A SERIOUS PUBLIC HEALTH AND ECONOMIC ISSUE THAT AFFECTS US ALL. BUT THERE IS A LACK OF UNDERSTANDING AMONG HEALTH CARE PROVIDERS AND CONSUMERS ALIKE. THE STAFF AT (YOUR FACILITY) IS CONDUCTING A PAIN AWARENESS DAY ON (DATE) TO FOCUS ON THE IMPORTANCE OF THE TREATMENT AND ASSESSMENT OF PAIN.”

ANNOUNCER:
TO LEARN MORE ABOUT PAIN AWARENESS DAY, CONTACT (YOUR NAME) AT (PHONE NUMBER) AND, FOR RESOURCES AND INFORMATION ABOUT PAIN, VISIT W-W-W-DOT- UNDERSTANDINGPAIN DOT-ORG. I’M ____________ REPORTING.

<td>OTC Pain Medication: What You Need to Know</td>
<td>Short film</td>
<td><a href="https://www.youtube.com/watch?v=jE0-r2APdc">https://www.youtube.com/watch?v=jE0-r2APdc</a></td>
<td>Tens of millions of Americans buy over-the-counter (OTC) medications for relief of minor aches and pains. Being OTCs doesn’t mean they’re harmless. And with more than 1,000 acetaminophen and NSAID (non-steroidal anti-inflammatory drug) containing medications, choosing the right medication can seem overwhelming. This film guides viewers in choosing the medication right for them and their loved ones and gives tips on taking them safely. Also available in Spanish.</td>
</tr>
<tr>
<td>Safely Taking and Storing OTC Pain Medication</td>
<td>Short film</td>
<td><a href="https://www.youtube.com/watch?v=bC5ckoxXh08">https://www.youtube.com/watch?v=bC5ckoxXh08</a></td>
<td>Once someone chooses an over-the-counter (OTC) pain medication that’s right for them or their loved one, it’s important to store them safely. This short film guides viewers on where to store meds, how to keep them Up and Away and Out of Sight of young children, how to prevent misuse, and what to do when a medication is no longer needed. Also available in Spanish.</td>
</tr>
<tr>
<td>Safe Medication Disposal</td>
<td>Short film</td>
<td><a href="https://www.youtube.com/watch?v=Eh7O8IVyzNs">https://www.youtube.com/watch?v=Eh7O8IVyzNs</a></td>
<td>An estimated 40% of medications sold end up unused. What do we do with medications that we no longer want? This</td>
</tr>
</tbody>
</table>
film offers viewers a simple step-by-step guide to safe disposal including: how to dispose of medications at home in three simple steps; why certain medications must be flushed; tips on where to dispose of medications outside the home; and how to keep personal information safe.

| OTC Pain Medication Quiz | Interactive quiz | https://www.agingresearch.org/hrotw-quiz-on-otc-pain-medications/ | This quiz tests users’ knowledge of safe use and storage of OTC pain medications. |

| AAPM Patient Center       | Web resources and Facts on Pain information designed for patients and members of the public. | http://www.painmed.org/patientcenter/ | The Patient Center is the public information center of the American Academy of Pain Medicine. AAPM members represent a variety of medical specialties that combine their focus on the diagnosis, treatment and management of pain. The goal of the Patient Center is to help you find:  
  - General information about pain  
  - A dedicated pain specialist in your area from AAPM's active membership  
  - AAPM's Press Room |
| Initiating Therapies for OIC | Free online webinar series. CME, CEU available. | Part 1: https://www.pathlms.com/aapm/courses/2608  
Part 2: https://www.pathlms.com/aapm/courses/2609 | Recommendations on Initiating Prescription Therapies for Opioid-Induced Constipation enduring virtual seminars (webinars) are designed for clinicians and all healthcare practitioners involved in the treatment of patients in pain. |
| Essentials of Pain | Online educational courses (payment required). CME available. | [https://www.pathlms.com/aapm/courses/1666](https://www.pathlms.com/aapm/courses/1666) | Essential Tools for Treating the Patient in Pain™ is designed for clinicians and all healthcare practitioners interested in obtaining an overview of the fundamentals of pain medicine in addition to identifying best practices and practical approaches to the treatment of common pain disorders. These on-demand education modules address the unmet education needs of all clinicians treating people with pain, through clinically-focused, case-based lectures that are designed to advance patient outcomes by improving the assessment, diagnosis, treatment, and management of patients with various acute and chronic pain disorders, including cancer and end-of-life conditions. |
| 2016 PCSS-O Webinars | Free online webinars. CME available. | [https://www.pathlms.com/aapm/courses/2907](https://www.pathlms.com/aapm/courses/2907) | Maintaining Balance Among Compassionate Prescribing, Ethical Clinical Strategies, and Societal Obligations: Effective pain management is a moral and ethical obligation - an important public health and health care issue. Access to safe and effective care for people suffering from pain is a priority that needs to be balanced in parallel with efforts to curb diversion and misuse of opioid drugs. |
| **Methadone Education Curriculum** | Free online webinar. CME available. | [https://www.pathlms.com/aapm/courses/1665](https://www.pathlms.com/aapm/courses/1665) | With a commitment to making high-impact, long-term change, the American Academy of Pain Medicine (AAPM) has developed a patient safety-focused web-based continuing medical education (CME) program for all prescribers of opioids, with a targeted focus on those who prescribe methadone for the treatment of chronic pain. The AAPM’s Methadone Education Curriculum is designed to equip prescribers with the knowledge, skills, and behaviors they need to implement evidence-based safe prescribing practices. Changes in prescribers’ knowledge, competence and performance will minimize risks and reduce harm for patients being treated for chronic pain with methadone. |
| **On-Demand Coding Seminars** | Online educational courses (payment required). | [https://www.pathlms.com/aapm/courses/2094](https://www.pathlms.com/aapm/courses/2094) | AAPM coding seminars discuss current and relevant industry trends in the pain medicine space. Stay current in pain medicine-related medical coding, billing, auditing, compliance, practice management, and much more. Save time and money by learning on your own pace and schedule with our on-demand pain medicine coding seminars. |
| **Pain Medicine** | Journal | [http://www.painmed.org/journal/](http://www.painmed.org/journal/) | *Pain Medicine* is the premier source of peer reviewed research and commentary on matters relevant to the multidisciplinary clinical practice of pain medicine. It is the official journal of the American Academy of Pain Medicine (AAPM), the Faculty of Pain Medicine of the Australian and New Zealand College of Anaesthetists (FPMANZCA), and the Spine Intervention Society (SIS). |

| The Art of Pain Management                    | Resource   | [https://www.theacpa.org/pain-management-tools/the-art-of-pain-management/](https://www.theacpa.org/pain-management-tools/the-art-of-pain-management/) | People with pain often comment that they find their experiences beyond expression. Talk therapy has been exhausted. There are no words to describe the journey they have taken. Both drawing and painting are an effective way for people with pain to express their level of suffering or the type of pain they are experiencing. However, art is not limited to drawing and painting. One can sculpt, use objects to create collages, or even finger paint to express your emotions. Even cooking is an art!
The ACPA has developed this resource full of art project suggestions, words of encouragement and information regarding music therapy. |
| ACPA Communication Tools                      | Resources  | [https://theacpa.org/Communication-Tools](https://theacpa.org/Communication-Tools) | Good communication with your health care provider is vital to getting the help you need to live well despite your pain.                                                                                 |
| Resource Guide to Chronic Pain Treatment      | Resource   | [https://www.theacpa.org/pain-management-tools/resource-guide-to-chronic-pain-treatments/resource-guide-to-chronic-pain-management/](https://www.theacpa.org/pain-management-tools/resource-guide-to-chronic-pain-treatments/resource-guide-to-chronic-pain-management/) | The ACPA believes that people with chronic pain benefit from being well informed about their medications. This knowledge may relieve the fears that can interfere with receiving maximum benefits from medications. This supplement is not meant to serve as medical advice for your condition or regarding your medication needs. Remember that the best source of information about your health and medication needs is from an open dialogue with your treating doctor. |

<td>Access to health care is one of the most urgent issues facing the communities Covenant Health serves. That's why each year we allocate 10 percent of our net bottom line to community outreach programs that improve health services for those who are underprivileged, uninsured or geographically isolated. To give our efforts greater impact, we formed the Covenant Community Health Screening Initiative. This group works to identify underserved communities and organize comprehensive screening clinics that provide education, early detection and ensure follow-up care where necessary.</td>

| The European Pain Federation EFIC® Core Curriculum for the European Diploma in Pain Medicine | Academic curriculum for medical doctors | https://www.europeanpainfederation.eu/core-curriculum/core-curriculum-for-european-pain-diploma-in-pain-medicine/ | The European Pain Federation (EFIC®) developed a core curriculum of pain knowledge, and diploma in pain medicine in 2015. EFIC® identified the need to have a Diploma, to test the knowledge of all those involved in the treatment of pain in order to better provide up to date knowledge, thinking and management, as well as to allow the sharing of best practice amongst clinicians.

The 2016 curriculum articulates the learning outcomes to be achieved through trainees’ self-directed learning, clinical experience in the workplace and other educational activities. |

</tr>
</tbody>
</table>
Caregiving can be a 24-hours a day/7-days a week job. Caring for a senior with Alzheimer’s or a child with special needs can be non-stop. Providing care around the clock can crowd out other important areas of life. And you never know when you will need to rush to the hospital or leave work at the drop of a hat. What challenges do family caregivers face, and how do they manage them day and night?

Morning: Getting off to work. The average family caregiver is a working mother of school-aged children. Mornings become a tricky balancing act of getting the kids ready for school, making sure your loved one has what they need for the day before getting yourself out the door for work.

All Day Long: Managing medications. Up to 70% of the time, the family caregiver – not the patient – manages the medications. The more serious the condition, the more likely it is that the family caregiver manages the medications for the patient. This means ensuring your loved one is taking their medication correctly and maintaining an up-to-date medication list.

During the Workday: Juggling caregiving and work. Six out of 10 family caregivers work full- or part-time in addition to juggling their caregiving responsibilities at home. And most of them say they have to cut back on working hours, take a leave of absence, or quit their job entirely.

Evening: Family time and meal time. Ensuring that you get proper nutrition will help you maintain strength, energy, stamina, and a positive attitude. Nutrition is as important for you as the caregiver as it for your loved one. Caregiving affects the whole family.

Late at Night: Taking time for yourself. Late at night might be the only time you get a few minutes for yourself. Make sure you take time to rest and recharge. The chance to take a breather and re-energize is vital in order for you to be as good a caregiver tomorrow as you were today.

The Middle of the Night: Emergency room visits. Have you ever had to take your loved one to the emergency room in the middle of the night? Be prepared ahead of time with what you need to know and what you need to have with you.

During National Family Caregivers Month, we recognize the challenges family caregivers face when their loved ones need Caregiving Around the Clock!

| About Us   | Information | [http://www.forgrace.org/about-us/](http://www.forgrace.org/about-us/) | Founded in 2002, For Grace’s main goal is to increase awareness and promote education of the gender disparity women experience in the assessment and treatment of their pain.  

We believe empowering women to be better consumers for their pain management care, sensitizing the general public to gender pain disparities and enlightening public policy makers about pain as a major health issue will improve life outcomes for all women in chronic pain.  

Also, we see increased medical research about the differences in how men and women experience pain as part of the answer to alleviating the toll of human suffering. We believe medical research will pave the way for gender-specific therapies that will better manage persistent pain. |
| The Wonder Project | Music Therapy | [http://www.forgrace.org/women-pain/wonder-project/](http://www.forgrace.org/women-pain/wonder-project/) | Our spokesperson, Cynthia Toussaint, has recorded her first CD after losing her singing voice to CRPS for 15 years – and this testament to the healing power of music therapy is dedicated it to all Women in Pain.

Dubbed “The Wonder Project”, this collection of songs captures the essence of the pain experience while conveying the joy of reinvention and coming out the other side to better wellness. |

physicians. These specialists from around the country will help us maintain a comprehensive view of the field and determine the research areas that hold the most promise in neuropathy research and treatment to develop new and effective therapies that can reverse, reduce and one day eliminate Peripheral Neuropathy. It is our ultimate goal to utilize every means and opportunity to dramatically improve the lives of those living with this painful and debilitating disorder.

|-----------------|----------|------------------------------------------------------------------------------------------------------------------|
| VM BioPharma, the United States division of ViroMed Co., Ltd. in Seoul, Korea, announced the first patient was dosed in the recently initiated Phase 3 clinical study evaluating VM202, a proprietary DNA based biopharmaceutical, in patients with painful diabetic peripheral neuropathy (DPN). This is the first pivotal gene therapy trial specifically targeting the most common cause of severe neuropathy.

“The initiation of a pivotal clinical trial for VM202 is incredibly exciting, because we observed in the Phase 2 trial a rapid and significant reduction in DPN pain, along with signals that VM202 may elicit a disease-modifying effect,” said Dr. Jack Kessler, M.D., professor of neurology at Northwestern University’s Feinberg School of Medicine and the principal investigator of the Phase 3 study (and former Board Member of the Foundation for Peripheral Neuropathy). “Current treatments for DPN are aimed at providing symptom management, and along with a high rate of patient failure, do not modify the underlying pathology of the condition.”

| Motto: Speaking with One Voice    | Information | [http://www.interculturalcancercouncil.org/icc-icc-caucus-home.html](http://www.interculturalcancercouncil.org/icc-icc-caucus-home.html) | “The Intercultural Cancer Council’s motto ‘Speaking with One Voice’ embodies the power of uniting a diverse and representative membership to raise issues, propose solutions and, most importantly, to effect change that benefits all regardless of race, ethnicity, socioeconomic status or geography. Finding leadership from the communities where cancer health disparities exist, the ICC is committed to returning to those leaders, their organizations and their communities, the skills, resources and programs that offer solutions to our call to action.” – Armin D. Weinberg, PhD  
Co-Founder, Intercultural Cancer Council  
Baylor College of Medicine |
“There is still a disproportionate cancer incidence, morbidity, and mortality among minorities, persons of low socioeconomic status in the United States, its associated territories and our Tribal Nations. Health inequities and health disparities suffered by these communities have been documented through many published reports including the tobacco crisis in America. There is still a critical need to develop knowledge and strategies to address this crisis with the leadership and full participation of the affected communities. The Intercultural Cancer Council will continue to provide a multicultural forum to address, discuss and demonstrate the importance and promotion of the issues of cancer and chronic diseases that impact our communities.” – Pamela M. Jackson, MS  
Executive Director,  
Intercultural Cancer Council  
Baylor College of Medicine

“The ICC is about solving national cancer issues with representation from all Americans. It cannot be defined as either an entity composed of grassroots organizations or categorized as mainstream, but as an American organization whose members are the fabric of which this nation is comprised. It is more of a fine salad than a melting pot.” – Lovell A. Jones, PhD  
Co-Founder, Intercultural Cancer Council  
Associate Dean for Research  
Prairie View A & M University College of Nursing

</tr>
</tbody>
</table>
organization and all of those we influence along the way will become stronger. And we even have fun while working on projects together.

We learn together and grow in our ability to:

- Demonstrate compassion and hope
- Understand
- Expect more and encourage the next step
- Increase acceptance of those with mental health, substance use, or trauma experiences in their communities of choice
- Increase awareness of the benefits of hiring peer support providers

Our vision is to make peer support services an option for anyone who needs the compassion and understanding of someone who has been there.

As an organization with international connections, we advocate for the worldwide wisdom that peer support providers have gained from their own experiences to be an important component in mental health treatment and in system transformation.

We believe peer supporters are, in many locations, an untapped resource for the mental health system and those who are being served. We also aim for better working conditions, compensation and the adoption of trauma-informed and recovery-oriented practices.

| National Pain       | Patient       | [https://powerofpain.org/national-pain-strategy/](https://powerofpain.org/national-pain-strategy/) | A core recommendation of the 2011 IOM Report: Relieving Pain in America is: “The Secretary of the Department of Health and Human Services should develop a comprehensive, population health-level strategy for pain prevention, treatment, management, education, reimbursement, and research that includes specific goals, actions, time frames, and resources.” The IOM report highlighted specific objectives for the strategy:

Describe how efforts across government agencies, including public–private partnerships, can be established, coordinated, and integrated to encourage population-focused research, education, communication, and community-wide approaches that can help reduce pain and its consequences and remediate disparities in the experience of pain among subgroups of Americans.

Include an agenda for developing physiological, clinical, behavioral,
psychological, outcomes, and health services research and appropriate links across these domains.

Improve pain assessment and management programs within the service delivery and financing programs of the federal government.

Proceed in cooperation with the Interagency Pain Research Coordinating Committee and the National Institutes of Health’s Pain Consortium and reach out to private-sector participants as appropriate. Involve the appropriate agencies and entities.

Include ongoing efforts to enhance public awareness about the nature of chronic pain and the role of self-care in its management.

| Resources for Fibromyalgia & Education | Education | [http://www.fmcpaware.org/resourceseducation.html](http://www.fmcpaware.org/resourceseducation.html) | Fibromyalgia (FM) doesn’t only affect the patients; it also impacts their family, friends, and colleagues.  
If your life has been touched by FM, as a patient or someone supporting a patient, here you’ll find resources to help you deal with the impact of FM—everything from the latest research news and details about ongoing clinical trials, to information to aid with decisions about healthcare options, disability, and insurance issues. |
| Education and Support Groups | Education & Support | [http://www.fmcpaware.org/community/nfmcpa-education-and-support-groups.html](http://www.fmcpaware.org/community/nfmcpa-education-and-support-groups.html) | We have a directory of support groups across the United States [here](http://www.fmcpaware.org/community/nfmcpa-education-and-support-groups.html). We also have a growing number of support groups internationally, which can be found [here](http://www.fmcpaware.org/community/nfmcpa-education-and-support-groups.html). Only logged in and registered members can start a support group. You can register as a member at [https://www.fmcpaware.org/nfmcpa-membership-2.html](https://www.fmcpaware.org/nfmcpa-membership-2.html).

The NFMCPA has created the directory as a service to those living with FM and caregivers to assist them in finding the nearest community support group. The groups listed and those that will be developed are operated independently, and the NFMCPA is not responsible for the actions of the groups or their members. This information is not to be used to solicit for personal, financial or professional gain. Our goal is to educate the community about groups and help people find support in their local areas.

You may read the all the terms and conditions the NFMCPA requires of support groups in order to be on the directory [here](http://www.fmcpaware.org/community/nfmcpa-education-and-support-groups.html).

---

| Clinical Trials | Research | [http://www.fmcpaware.org/fibromyalgia/research-clinical-trials.html](http://www.fmcpaware.org/fibromyalgia/research-clinical-trials.html) | Patient participation is crucial to find more and better answers to the perplexing questions that surround fibromyalgia (FM) and chronic pain. Please consider whether it would be appropriate to participate in this work and check this page often for information regarding research opportunities close to you.

What are clinical trials? How can you volunteer, and what to consider about participating? [Click](http://www.fmcpaware.org/fibromyalgia/research-clinical-trials.html) here for more information. |

| Health Policy|               | [http://www.nmanet.org/page/HealthPolicy](http://www.nmanet.org/page/HealthPolicy) | **Prioritize Preventive Care**  
The United States health care system faces serious challenges when it comes to prevention and disease management. Our healthcare system spends about 75 cents of every healthcare dollar dealing with chronic diseases, most of which are either preventable or treatable. Prevention and increased coordination of care would significantly alter the cost equation. The NMA supports a shift toward prevention and disease management that will serve to improve quality of health care in all populations. |
|              |               |                                          | **Preserve the Health Care Safety Net**  
As the “Conscience of American Medicine,” the NMA is very concerned about the preservation of the health care safety net. The NMA is convinced that advocacy efforts to protect entitlements such as Medicare and Medicaid are critical to the survival of the nation’s medically
underserved populations. Insured Americans, along with federal and state governments, already foot the bill for the uncompensated care of the uninsured. Higher premiums and disproportionate share (DSH) payments could be reduced if more of the uninsured were covered under their own (affordable) plans.

**Reduce Health Disparities**
The NMA has been responding to inequities in healthcare throughout its history. Although the reasons for disparate health are numerous and complex, bold action must be taken now to reduce and eliminate disparities. One such way is through health information technology (HIT). HIT adoption stands to benefit all Americans by improving information exchange, reducing errors, and cutting costs.

<td>Community Health Worker Program</td>
<td>Information</td>
<td><a href="http://www.iamempowered.com/programs/community-health-workers-program">http://www.iamempowered.com/programs/community-health-workers-program</a></td>
<td>In partnership with Morehouse School of Medicine, the National Urban League designed and implemented the Community Health Worker (CHW) program to promote healthy lifestyles among African Americans, improve their health outcomes and their access to healthcare and other community assets, and influence public policy in favor of community health worker models. CHW is a Signature Program of the National Urban League. Chief Community Health Workers with a background in health or health education work directly with clients. CHWs also oversee workers from the local community with similar socio-economic and cultural backgrounds who serve as coaches to help clients carry out their action plans. The CHW program targets African American adults who are at risk for obesity, diabetes, heart disease and other health-related issues.</td>
</tr>
</tbody>
</table>
chronic health issues. Many clients are currently or formerly engaged in other programs of the Urban League affiliate, such as job training and placement, housing counseling, financial education, seniors’ programs, substance abuse and prevention programs, or voter registration. By helping participants address a broad range of economic, social and psychosocial issues, the Urban League stabilizes and improves the quality of their lives and incorporates a holistic approach to health.

National Urban League affiliates and Morehouse adapted the CDC’s Power to Prevent curriculum into an authentic, culturally-sensitive educational tool for chronic disease management and community resources. It encourages and supports participants as they take ownership of their health, lifestyle behaviors and health treatment. It includes a strong mental health and wellness component that acknowledges the stress factors of race and poverty in underserved communities.

| Health Wellness Tour | Information | http://www.iamempowered.com/programs/walgreens-health-wellness-tour | Walgreens Way to Well Health Tour hosts health fairs in Urban League cities. The national tour will provide free health resources to residents in urban and minority communities who experience disproportionately higher rates of preventable disease. The service is free, and insurance will not be billed.

The health tour’s bundle of free health tests and risk assessments is designed to provide participants with personal health insights that may indicate symptoms and potential risks for cancer, heart disease and diabetes. Tests include total cholesterol, glucose, blood pressure, body mass index, body composition, skeletal muscle, resting metabolism, visceral fat, real body age and body weight. Collectively, the health tests valued at over $100, are administered to
adults age 18 years and older by certified wellness staff and can be completed in approximately 20 minutes. Afterward, participants will consult with a Walgreens pharmacist or certified wellness staff about his or her results.

Also available with the tour are educational health and wellness resources provided by NUL as well as Walgreens Way to Well cause partners: American Heart Association (AHA), American Cancer Society (ACS), American Diabetes Association (ADA), Juvenile Diabetes Research Foundation (JDRF) and Susan G. Komen for the Cure.

<td>While you are seeking effective treatment for vulvar pain, here are some coping measures to relieve symptoms and prevent further irritation. Even when your symptoms are under control, these guidelines are recommended as a preventive strategy.</td>
</tr>
</tbody>
</table>

**Clothing and Laundry**

- Wear all-white cotton underwear.
- Do not wear panty hose (wear thigh high or knee-high hose instead).
- Wear loose-fitting pants or skirts.
- Remove wet bathing suits and exercise clothing promptly.
- Use dermatologically approved detergent such as Purex or Clear.
- Double-rinse underwear and any other clothing that comes into contact with the vulva.
- Do not use fabric softener on undergarments.
Hygiene
- Use soft, white, unscented toilet paper.
- Use lukewarm or cool sitz baths to relieve burning and irritation.
- Avoid getting shampoo on the vulvar area.
- Do not use bubble bath, feminine hygiene products, or any perfumed creams or soaps.
- Wash the vulva with cool to lukewarm water only.
- Rinse the vulva with water after urination.
- Urinate before the bladder is full.
- Prevent constipation by adding fiber to your diet (if necessary, use a psyllium product such as Metamucil) and drinking at least 8 glasses of water daily.
- Use 100% cotton menstrual pads and tampons.

Physical Activities
- Avoid exercises that put direct pressure on the vulva such as bicycle riding and horseback riding.
- Limit intense exercises that create a lot of friction in the vulvar area (try lower intensity exercises such as walking).
- Use a frozen gel pack wrapped in a towel to relieve symptoms after exercise.
- Enroll in an exercise class such as yoga to learn stretching and relaxation exercises.
- Don’t swim in highly chlorinated pools.
- Avoid the use of hot tubs.

Everyday Living
- Use a foam rubber donut for long periods of sitting.
- If you must sit all day at work, try to intersperse periods of standing (e.g., rearrange your office so that
- Learn some relaxation techniques to do during the day (The Relaxation and Stress Reduction Workbook by Davis, Eshelman and McKay or The Chronic Pain Control Workbook by Catalano and Hardin are recommended).

Managing pain at home
Recovery time

| Pain Management | Education | [http://www.healthywomen.org/condition/pain-management](http://www.healthywomen.org/condition/pain-management) | Pain is one of the most common human experiences. Yet pain has never been fully accepted as a medical problem. One reason may be because pain is a subjective and highly individualized experience. You can measure pain even though you can't touch it, feel it (unless it's your own), image it or prove its existence. Even a pinprick creates differing sensations of pain for different people.

Nevertheless, chronic pain affects millions of Americans. Pain is the body's way of sending a warning to the brain that something is wrong. Aches are felt when pain messages, carried by chemicals called neurotransmitters, travel from the nerves along the spinal cord to the brain. In the brain, pain messages are meshed with thoughts, emotions and expectations that shape our interpretation and response to pain. |
Nearly every career in the healthcare industry is in increasingly high demand, especially nursing. Nurses care for patients in a number of ways, and professionals who commit to extra training in order to become nurse practitioners have an even wider scope of responsibilities. A nurse practitioner (NP), also known as an Advanced Registered Nurse Practitioner (ARNP), performs tasks comparable to that of a doctor, from prescribing medication or ordering and interpreting the results of tests to performing minor surgeries. Online NP programs can be found at both the master's and doctoral levels. Our list of top online schools offering NP master's programs or top online schools offering Doctor of NP programs can help prospective NPs find an online program that has an affordable tuition and strong academics.

Because NP students usually seek nurse practitioner licensure after graduating, it is essential that they select accredited programs. Licensing and certification boards will not recognize a degree earned through a non-accredited school.

Click on link to the left to see selected resources relating to federal and state policies governing pain management and the appropriate use of opioid analgesics, including methods to reduce medication diversion and non-medical use.

### Online Course

**Type**: Education  
**URL**: [http://www.painpolicy.wisc.edu/online-course](http://www.painpolicy.wisc.edu/online-course)

Every day throughout the world, millions of adults and children suffer physical pain after accidents, surgery, and from chronic diseases like cancer and AIDS. Unrelieved pain can have devastating effects on quality of life. Although there are many drug and non-drug approaches to treating pain, opioid analgesics play an essential role in relieving moderate to severe pain. However, most of the world's population lacks access to opioid medications, especially in low- and middle-income countries, and in some developed countries as well.

This course is about the relationship between government policies that affect the medical availability of opioid analgesics.
and patients who experience moderate to severe pain. It is critically important for health care professionals and government drug regulators, as well as advocates involved in the area of palliative care and pain relief, to understand the government policies that control opioid analgesics and how they can impact medication availability and patient access to opioid analgesics.

What is palliative care?

Palliative (pronounced PAL-lee-uh-tiv) care focuses on the whole person and the relief of symptoms, such as pain, shortness of breath, fatigue, constipation, nausea, loss of appetite, depression and difficulty sleeping. It can help patients carry on with daily life, including tolerating medical treatments. Palliative care is appropriate at any stage of an illness and can be provided at the same time as your cancer treatment.

| Battle For Grace Book Project | Empowerment Resource | http://www.forgrace.org/women-pain/battle-for-grace-memoir/ | Our founder Cynthia Toussaint's *Battle for Grace* is a gut-wrenching memoir about excruciating pain, remarkable redemption and impossible love, told warts and all by the two people who lived it.

The book describes a journey that took Cynthia Toussaint and her life partner John Garrett to depths that could have ended their lives, but instead are giving hope to millions of women around the world. Hope borne out of devastating pain that’s been overcome by a brave love for each other and for life.

All of Cynthia Toussaint’s net proceeds from the sale of this book go to [For Grace](http://www.forgrace.org/women-pain/battle-for-grace-memoir/).

| Women In Pain Share Your Story Project | Online Resource | http://www.forgrace.org/get-involvedshare-your-story/share-your-story/ | If you are a Woman In Pain or know someone who is, we invite you to email us your story (in no more than 400 words) and we will post it below. (Note: We reserve the right to edit submissions.) Specifically, we are looking for stories that detail lack of diagnosis, under-treatment and/or health care provider abuse related to your gender.

Be sure to tell us your name, as well as your city, state and country. Feel free to attach a photo of yourself. Also, if you’re interested in sharing your story with the media, please include your contact number (this number will not be posted publicly).

Please submit your story, photo and information to our main For Grace address at `mailto:forgracewip@yahoo.com`. Thank you in advance! |

National Pain Strategy outlines actions for improving pain care in America

Plan seeks to reduce the burden and prevalence of pain and to improve the treatment of pain

The Office of the Assistant Secretary for Health at the U.S. Department of Health and Human Services today released a National Pain Strategy, outlining the federal government’s first coordinated plan for reducing the burden of chronic pain that affects millions of Americans. Developed by a diverse team of experts from around the nation, the National Pain Strategy is a roadmap toward achieving a system of care in which all people receive appropriate, high quality and evidence-based care for pain.

“Chronic pain is a significant public health problem, affecting millions of Americans and incurring significant economic costs to our society,” said Karen B. DeSalvo, M.D., M.P.H., M.Sc., HHS acting assistant secretary for health. “This report identifies the key steps we can take to improve how we prevent, assess and treat pain in this country.”

In 2011, in recognition of the public health problem of pain in America, the Institute of Medicine called for a coordinated, national effort of public and private organizations to transform how the nation understands and approaches pain management and prevention. In response, HHS tasked the Interagency Pain Research Coordinating Committee (IPRCC), a group of representatives from the Department of Defense, Department of Veterans Affairs, Agency for Healthcare Research and Quality, Centers for Disease Control and Prevention, Food and Drug Administration, National Institutes of Health and members of the public, including scientists and patient advocates, with developing a National Pain Strategy that recognizes access to safe and effective care for people suffering from pain as a public health priority. The final Strategy being released today makes recommendations for improving overall pain care in America in six key areas: population research; prevention and care; disparities; service delivery and payment; professional education and training; and public education and communication.

More specifically, the Strategy calls for:

- Developing methods and metrics to monitor and improve the prevention and management of pain.
• Supporting the development of a system of patient-centered integrated pain management practices based on a biopsychosocial model of care that enables providers and patients to access the full spectrum of pain treatment options.
• Taking steps to reduce barriers to pain care and improve the quality of pain care for vulnerable, stigmatized and underserved populations.
• Increasing public awareness of pain, increasing patient knowledge of treatment options and risks, and helping to develop a better-informed health care workforce regarding pain management.

“Of the millions of people who suffer from chronic pain, too many find that it affects many or all aspects of their lives,” said Linda Porter, Ph.D., director, NIH’s Office of Pain Policy and co-chair of the IPRCC working group that helped to develop the report. “We need to ensure that people with pain get appropriate care and that means defining how we can best manage pain care in this country.”

The IPRCC engaged with a broad range Strategy, the Office of the Assistant Secretary for Health, in conjunction with other HHS operating and staff divisions, will consider the recommendations included in the Strategy and develop an implementation and of experts, including pain care providers, scientists, insurers, patient advocates, accreditation boards, professional societies and government officials to develop the Strategy. Upon the release of the evaluation plan based on this process. In addition, the IPRCC is creating a research agenda to advance pain-related research to realize the goals of the Strategy.

“Pain can affect all aspects of a patient’s life, so we wanted to hear from everyone,” said Sean Mackey, M.D., Ph.D., chief, Division of Pain Medicine, Stanford University, and a co-chair of the IPRCC working group that helped to develop the report. “Similarly, to achieve the goals in this report, we will need everyone working together to create the cultural transformation in pain prevention, care and education that is desperately needed by the American public.”

Better pain care, achieved through implementation of the National Pain Strategy, is an essential element in the Secretary’s initiative to address the opioid epidemic. Access to care that appropriately assesses benefits and risks to people suffering from pain remains a priority that needs to be balanced with efforts to curb inappropriate opioid prescribing and use practices. The Strategy provides opportunities for reducing the need for and over-reliance on prescription opioid medications, including:

• Improving provider education on pain management practices and team-based care in which multiple treatment options are offered – moving away from an opioid-centric treatment paradigm.
• Improving patient self-management strategies, as well as patient access to quality, multidisciplinary care that does not depend solely on prescription medications, especially for vulnerable populations.
• Encouraging the evaluation of risks and benefits of current pain treatment regimens.
• Providing patients with educational tools to encourage safer use of prescription opioids.
• Conducting research to identify how best to provide the appropriate pain treatments to individual patients based on their unique medical conditions and preferences.

These efforts will build on the current work underway at HHS to equip providers with the tools and information they need to make informed patient-centered treatment decisions that include safer and appropriate opioid prescribing.
EXECUTIVE SUMMARY

In 2010, the National Institutes of Health (NIH) contracted with the Institute of Medicine (IOM) to undertake a study and make recommendations “to increase the recognition of pain as a significant public health problem in the United States.” The resulting 2011 IOM report called for a cultural transformation in pain prevention, care, education, and research and recommended development of “a comprehensive population health-level strategy” to address these issues. In response to the report, the Assistant Secretary for Health, Department of Health and Human Services (HHS) asked the Interagency Pain Research Coordinating Committee (IPRCC) to oversee creation of this National Pain Strategy (NPS). Experts from a broad array of public and private organizations explored areas identified in the core IOM recommendations—population research, prevention and care, disparities, service delivery and reimbursement, professional education and training, and public awareness and communication. A companion effort is underway to address the IOM’s call for further research to support the cultural transformation.

As articulated in the IOM report, efforts to reduce the burden of pain in the United States cannot be achieved without an expanded and sustained investment in basic and clinical research on the biopsychosocial mechanisms that produce and maintain chronic pain and development of safe and effective pain treatments. As a first step to respond to the full set of research recommendations of the IOM, the IPRCC and the NIH completed a comprehensive analysis of the existing federal pain research portfolio. The next step is development of the Federal Pain Research Strategy which will complement the NPS. It will identify gaps in our research agenda and recommend directions for new research to guide federal entities in their support of essential pain research programs. Findings and recommendations from the IOM report guided the development of the National Pain Strategy (NPS).

These included:

- The public at large and people with pain would benefit from a better understanding of pain and its treatment to encourage timely care, improve medical management, and combat stigmatization.
- Increased scientific knowledge regarding the pathophysiology of pain has led to the conclusion that chronic pain can be a disease in itself that requires adequate treatment and a research commitment.
- Chronic pain is a biopsychosocial condition that often requires integrated, multimodal, and interdisciplinary treatment, all components of which should be evidence-based.
- Data are lacking on the prevalence, onset, course, impact, and outcomes of most common chronic pain conditions. The greatest individual and societal benefit would accrue from a focus on chronic pain.
• Every effort should be made to prevent illnesses and injuries that lead to pain, the progression of acute pain to a chronic condition, and the development of high-impact chronic pain.
• Significant improvements are needed to ensure that pain assessment techniques and practices are high-quality and comprehensive. The Interagency Pain Research Data Base and Summary Report can be found at: http://iprcc.nih.gov/portfolio_analysis/portfolio_analysis-index.htm
• Self-management programs can improve quality of life and are an important component of acute and chronic pain prevention and management.
• People with chronic pain need treatment approaches that consider individual differences in susceptibility for pain and response to treatment, as well as improved access to treatments that consider their preferences and are in accord with best evidence on safety and effectiveness.
• Treatments that are ineffective, whose risks exceed their benefits, or that may cause harm for certain subgroups need to be identified and their use curtailed or discontinued.
• Much of the responsibility for front-line pain care rests with primary care clinicians who are not sufficiently trained in pain assessment and comprehensive, evidence-based treatment approaches.
• Greater collaboration is needed between primary care clinicians and pain specialists in different clinical disciplines and settings, including multispecialty pain clinics.
• Significant barriers to pain care exist, especially for populations disproportionately affected by and undertreated for pain and need to be overcome.
• People with pain are too often stigmatized in the health care system and in society, which can lead to delayed diagnosis or misdiagnosis, bias in treatment, and decreased effectiveness of care.

The objectives and action plans developed in this report to address the core IOM findings and recommendations are summarized below by work group topics and include:

Population Research
Understanding the significance of health problems in a population is a core public health responsibility. To increase the quantity and quality of what is known about chronic pain within the U.S. population, the NPS recommends specific steps to increase the precision of information about chronic pain prevalence overall, for specific types of pain, and in specific population groups and to track changes in pain prevalence, impact, treatment over time, to enable evaluation of population-level interventions and identification of emerging needs. It also recommends development of the capacity to gather information electronically about pain treatments, their usage, costs, effectiveness, and safety.

Prevention and Care
Prevention of acute and chronic pain, especially primary prevention strategies, needs greater emphasis throughout the health care system, including delivery of long term services and
supports, and in environments where injuries are likely to occur (e.g., the workplace), and among people at increased risk of developing chronic pain. When chronic pain develops, treatment should begin with a comprehensive assessment, followed by creation of a care plan that can evolve over time to address the full range of biological, psychological, and social effects of pain on the individual. The NPS recommends strengthening the evidence base for pain prevention strategies, assessment tools, and outcome measures—particularly those relevant for primary care—in part through the development of new, rigorously researched approaches. It also recommends improvements in pain self-management programs that can help affected individuals improve their knowledge, skills, and confidence to prevent, reduce, and cope with pain, and minimize treatment risks and adverse effects.

**Disparities**

Pain is more prevalent or disabling and/or care is inadequate in certain vulnerable populations including people with limited access to health care services, racial and ethnic minorities, people with low income or education, children, older adults, and those at increased risk because of where they live or work, or because of limited communication skills. Many of these groups face additional problems of stigmatization and bias in pain care. To eliminate disparities and promote equity in pain assessment and treatment, the NPS recommends efforts aimed at increasing understanding of the impact of bias and supporting effective strategies to overcome it; increasing access to high-quality pain care for vulnerable population groups; and improving communication among patients and health professionals.

**Service Delivery and Payment**

Evidence suggests that wide variations in clinical practice, inadequate tailoring of pain therapies to individuals, and reliance on relatively ineffective and potentially high-risk treatments such as inappropriate prescribing of opioid analgesics, or certain surgical interventions, not only contribute to poor quality care for people with pain, but also increase health care costs. The NPS recommends a population-based, biopsychosocial approach to pain care that is grounded in scientific evidence, integrated, multimodal, and interdisciplinary, while tailored to an individual patient’s needs. Research and demonstration efforts are needed that build on current knowledge, develop new knowledge, and support further testing and diffusion of model delivery systems.

**Professional Education and Training**

Although pain is one of the most common reasons for health care visits, most health profession education programs have yet to give it adequate attention. The NPS recommends steps to improve discipline-specific core competencies, including basic knowledge, assessment, effective team-based care, empathy, and cultural competency. It encourages educational program accreditation bodies and professional licensure boards to require pain teaching and clinician learning at the undergraduate and graduate levels. The NPS also recommends development of a web-based pain education portal that would contain up-to-date, comprehensive, and easily accessed educational materials. These training efforts should be made in coordination with current HHS efforts to develop tools for providers to recognize the risk factors and symptoms of opioid use disorders. Examples of ongoing government efforts, such as the prescriber training developed as part of opioid risk mitigation strategies appropriate
prescribing of extended-release and long-acting (ER/LA) opioid analgesics is included in the FDA Blueprint for Prescriber Education that is part of the FDA-approved Risk Evaluation and Mitigation Strategy for Extended-Release and Long-Acting Opioid Analgesics. 

Public Education and Communication

Key to a cultural transformation in pain care is a greater understanding—among members of the public and people with pain alike—of important aspects of chronic pain and its appropriate treatment. The National Pain Strategy recommends a national public awareness campaign involving public and private partners to address misperceptions and stigma about chronic pain. The learning objectives of the campaign would emphasize the impact and seriousness of chronic pain and its status as a disease that requires appropriate treatment. In addition, an educational campaign on the safer use of pain medications that is targeted to people with pain whose care includes these medications is recommended. Next Steps for Implementation Sustained efforts across HHS, working through operating divisions, staff divisions, and with non-governmental partners, will be required in order to implement the public health, clinical, and research initiatives described in this Strategy. These efforts will help to prevent pain, improve patient care and outcomes, assure appropriate patient and provider education, and advance pain-related applied research. The Office of the Assistant Secretary for Health (OASH), in conjunction with HHS operating and staff divisions, will consider the recommendations included in the Strategy and develop an implementation and evaluation plan based on this process.

THE NATIONAL PAIN STRATEGY:

The objectives of the National Pain Strategy aim to decrease the prevalence of pain across its continuum from acute to high-impact chronic pain and its associated morbidity and disability across the lifespan. The intent is to reduce the burden of pain for individuals, their families, and society as a whole. The Strategy envisions an environment in which:

People experiencing pain would have timely access to patient-centered care that meets their biopsychosocial needs and considers individual preferences, risks, and social contexts, including dependence and addiction.

- People with pain would have access to educational materials and learn effective approaches for pain self-management programs to prevent, cope with, and reduce pain and its disability.
- Patients, including those with low literacy or communication disabilities, would have access to information they can understand about the benefits and risks of treatment options, such as those associated with prescription opioid analgesics.
- All people with pain would be assured of receiving needed preventive, assessment, treatment, and self-management interventions, regardless of race, color,
nationality, ethnicity, religion, income, gender, sex, age (neonatal through end of life), mental health and substance use disorders, physical or cognitive disability, sexual orientation and gender identification, geographic location, education, language proficiency, health literacy, or medical condition. All pain-related services would be provided without bias, discrimination, or stigmatization.

- Americans would recognize chronic pain as a complex disease and a threat to public health and productivity. Individuals who live with chronic pain would be viewed and treated with compassion and respect.
- Clinicians would take active measures to prevent the progression of acute to chronic pain and its associated disabilities.
- Clinicians would undertake comprehensive assessments of patients with chronic pain, leading to an integrated, patient-centered plan of coordinated care, managed by an interdisciplinary team, when needed. Treatment would involve high-quality, state-of-the-art, multimodal, evidence-based practices. While most pain care would be coordinated by primary care practitioners, specialists would be involved in the care of patients who have increased comorbidities, complexity, or are at risk for dependence or addiction.
- Clinicians would receive better education and training on biopsychosocial characteristics and safe and appropriate management of pain. Clinician’s knowledge would be broadened to encompass an understanding of individual variability in pain susceptibility and treatment response, the importance of shared (patient-providers) and informed decision-making, ways to encourage pain self-management, appropriate prescribing practices, how empathy and cultural sensitivity influence the effectiveness of care, and the role of complementary and integrative medicine.
- Payment structures would support population-based care models of proven effectiveness in interdisciplinary settings and encourage multimodal care aimed at improving a full range of patient outcomes.
- Electronic data on pain assessment and treatment would be standardized, and health systems would maintain pain data registries that include information on the psychosocial/functional impact of chronic pain and the costs and effectiveness of pain management interventions. These data resources would be used in an ongoing effort to evaluate, compare, and enhance health care systems, identify areas for further research, and assess therapies for quality and value.
- The evolution toward a public health approach to pain prevention and care would be facilitated by epidemiologic, health services, social science, medical informatics, implementation, basic, translational, and clinical research, informed by clinician/scientist interactions.
- Data on the health and economic burdens of chronic pain would guide federal and state governments and health care organizations in their efforts to work toward these objectives. Such data would lay the groundwork for enhancing the effectiveness and safety of pain care overall and for specific population groups and would enable monitoring of the effectiveness of policy initiatives, public education efforts, and changing treatment patterns.
• A more robust and well trained behavioral health work force would be available to support the needs of patients who suffer from chronic pain, including those at risk who need mental health care and substance abuse prevention and recovery treatment.

• The actions in this strategy would be undertaken in the context of the dual crises of pain and opioid dependence, overdose, and death in the United States. Actions to improve pain care and patient access to and appropriate use of opioid analgesics for pain management would be coordinated and balanced with the need to curb inappropriate prescribing and use practices. To achieve this balance a broad range of stakeholders including those engaged in pain care and pain care policies, as well as those working in substance use prevention, treatment, and recovery, would be engaged as the actions of the NPS are undertaken.
